KONFORMITÄTSERLÄHRUNG
DECLARATION OF CONFORMITY
DÉCLARATION DE CONFORMITÉ

Produkt: Labor-Zentrifuge
Product: Laboratory centrifuge
Produit: Centrifugeuse de laboratoire

Gerät: Sorvall ST 16
Model: Sorvall ST16R

Best.-Nr.: 75004240
Cat.-No.: 75004380

Dieses Produkt wurde in Übereinstimmung mit den Richtlinien
elektromagnetische Verträglichkeit (EMV) und 98/79/EG In-vitro-Diagnostika (ivD) hergestellt
und geprüft.

This product is manufactured and duly carried out in compliance with directions 2006/95/EC
(EMC) and 98/79/EC in vitro diagnostic medical devices.

Ce produit est fabriqué et testé selon les directives
2006/95/CE matériel électrique destiné à être employé dans certaines limites de tension,
2005/42/CE & 98/37/CE machines, 2004/108/CE la compatibilité électromagnétique,
98/79/CE dispositifs médicaux de diagnostic in vitro.

WEEE Conformity

This product is subject to the regulations of the EU Waste Electrical & Electronic Equipment (WEEE) Directive 2002/96. It is marked by the symbol opposite:

Thermo Fisher Scientific has entered into agreements with recycling and disposal companies in all EU Member States for the recycling and disposal of this device. For information on recycling and disposal companies in Germany and on the products of Thermo Fisher Scientific, which fall under the RoHS Directive (Restriction of the use of certain hazardous substances in electrical and electronic equipment), please visit the website www.thermo.com/WEEERoHS.

Preface

Before starting to use the centrifuge, read through this instruction manual carefully and follow the instructions.

The information contained in this instruction manual is the property of Thermo Fisher Scientific; it is forbidden to copy or pass on this information without explicit approval.

Failure to follow the instructions and safety information in this instruction manual will result in the expiration of the seller’s warranty.

Proper use

- This centrifuge is a laboratory product designed to separate components by generation of Relative Centrifugal Force. It separates human samples (e.g. blood, urine and other body fluids) collected in appropriate containers, either alone or after addition of reagents or other additives.
- As general-purpose centrifuge, it is designed to also run other containers filled with chemicals, environmental samples and other non-human body samples.
- This centrifuge should be operated by trained specialists only.
Prerequisite for the safe operation of the Sorvall ST 16 / 16R is a work environment in compliance with standards, directives and trade association safety regulations and proper instruction of the user:

The safety regulations contain the following basic recommendations:

- Maintain a radius of at least 30 cm around the centrifuge.
- Implementation of special measures which ensure that no one can approach the centrifuge for longer than absolutely necessary while it is running.
- The mains plug must be freely accessible at all times. Pull out the power supply plug or disconnect the power supply in an emergency.

In order to ensure safe operation of the Sorvall ST 16 / 16R, the following general safety regulations must be followed:

- Do not manipulate the safety devices.
- The centrifuge should be operated by trained specialists only.
- The centrifuge is to be used for its intended purpose only.
- Plug the centrifuge only into sockets which have been properly grounded.
- Do not move the centrifuge while it is running.
- Use only rotors and accessories for this centrifuge which have been approved by Thermo Fisher Scientific. Exceptions to this rule are commercially available glass or plastic centrifuge tubes, provided they have been approved for the speed or the RCF value of the rotor.
- Do not use rotors which show any signs of corrosion and/or cracks.
- Do not touch the mechanical components of the rotor and do not make any changes to the mechanical components.
- Use only with rotors which have been properly installed. Follow the instructions on the Autolock in section “Rotor installation” on page 4-2.
- Use only with rotors which have been loaded properly. Follow the instructions given in the rotor manual.
- Never overload the rotor. Follow the instructions given in the rotor manual.
- Never start the centrifuge when the lid is open.
- Never open the lid until the rotor has come to a complete stop and this has been confirmed in the display.
• The lid emergency release may be used in emergencies only to recover the samples from the centrifuge, e.g. during a power failure (see section “Mechanical emergency lid release” on page 7-2).

• Never use the centrifuge if parts of its cover panels are damaged or missing.

• Do not touch the electronic components of the centrifuge or alter any electronic or mechanical components.

• Please observe the safety instructions.

Please pay particular attention to the following aspects:

• Location: well-ventilated environment, set-up on a level and rigid surface with adequate load-bearing capacity.

• Rotor installation: make sure the rotor is locked properly into place before operating the centrifuge.

• Especially when working with corrosive samples (salt solutions, acids, bases), the accessory parts and vessel have to be cleaned carefully.

• Always balance the samples.

Centrifuging hazardous substances:

• Do not centrifuge explosive or flammable materials or substances which could react violently with one another.

• The centrifuge is neither inert nor protected against explosion. Never use the centrifuge in an explosion-prone environment.

• Do not centrifuge inflammable substances.

• Do not centrifuge toxic or radioactive materials or any pathogenic micro-organisms without suitable safety precautions.

  When centrifuging microbiological samples from the Risk Group II (according to the "Laboratory Bio-safety Manual" of the World Health Organization WHO), aerosol-tight biological seals have to be used.

  For materials in a higher risk group, extra safety measures have to be taken.

• If toxins or pathogenic substances have gotten into the centrifuge or its parts, appropriate disinfection measures have to be taken (see "Disinfection" on page 6-3).

• Highly corrosive substances which can cause material damage and impair the mechanical stability of the rotor, should only be centrifuged in corresponding protective tubes.

**IF A HAZARDOUS SITUATION OCCURS, TURN OFF THE POWER SUPPLY TO THE CENTRIFUGE AND LEAVE THE AREA IMMEDIATELY.**

**Normal use**

The centrifuge is to be used for separating materials of different density or particle size suspended in a liquid.

Maximum sample density at maximum speed: $1,2 \frac{g}{cm^2}$

Characteristics

The Sorvall ST 16 / 16R is an in-vitro diagnostics device according to the In-Vitro Diagnostics Directive 98/79/EC.

Several rotors with commercial tubes can be used.

The set speed is reached in seconds. The maintenance-free induction motor ensures quiet and low-vibration operation even at high speeds, and guarantees a very long lifetime.

The user-friendly control panel makes it easy to pre-set the speed, RCF value, running time, temperature, and running profile (acceleration and braking curves). You can choose between the display of speed and RCF or the entry mode.

These settings can be changed even while the centrifuge is running.

With the help of the PULSE-key, you can also centrifuge a sample for just a few seconds, if called for.

The Sorvall ST 16 / 16R is equipped with various safety features:

- The housing and rotor chamber consist of steel plate, the interior of armour steel, while the front panel is made of high-impact resistant plastic.
- The lid is equipped with a view port and a lock.
- The lid of the centrifuge can only be opened while the centrifuge is switched on and the rotor has come to a complete stop. The centrifuge cannot be started until the lid has been closed properly.
- The integrated rotor detection systems ensures that no inadmissible speed settings can be preselected.
- Electronic Imbalance recognition
- Lid emergency release: For emergencies only, e.g. during power failures (see “Mechanical emergency lid release” on page 7-2)
# Technical Data

The technical data of the rotors and the corresponding adapters and reduction sleeves for various commercially available containers can be found in the corresponding rotor operating manuals.

For more information visit our website at: http://www.thermo.com
Before use

Contents
- “Before setting up” on page 2-2
- “Transporting the centrifuge” on page 2-2
- “Location” on page 2-2
- “Aligning the centrifuge” on page 2-3
- “Mains connection” on page 2-3
- “Storage” on page 2-4
Before setting up

1. Check the centrifuge and the packaging for any shipping damage. Inform the shipping company and Thermo Fisher Scientific immediately if any damage is discovered.

2. Remove the packaging.

3. Check the order for completeness (see “Scope of supply” on page iii.). If the order is incomplete, please contact Thermo Fisher Scientific.

Transporting the centrifuge

- Due to its weight (see “Technical Data” on page 1-3), the centrifuge should be carried by several people.
- Always lift the centrifuge at both sides.

Figure 2-1. Lifting the centrifuge at both sides.

- The centrifuge can be damaged by impacts.
- Transport the centrifuge upright and if at all possible in its packaging.

WARNING Always lift the centrifuge on both sides. Never lift the centrifuge by its front or the back panel. Always remove the rotor before moving the centrifuge.

Location

The centrifuge should only be operated indoors.

The set-up location must fulfil the following requirements:

- A safety zone of at least 30 cm must be maintained around the centrifuge. People and hazardous substances must be kept out of the safety zone while centrifuging.
• The supporting structure must be stable and free of resonance, for example a level laboratory bench.
• The supporting structure must be suitable for horizontal setup of the centrifuge.
• The centrifuge should not be exposed to heat and strong sunlight.

**WARNING**  UV rays reduce the stability of plastics. Do not subject the centrifuge, rotors and plastic accessories to direct sunlight.

• The set-up location must be well-ventilated at all times.

### Aligning the centrifuge

The alignment of the centrifuge must be checked every time after moving it to a different location. The supporting structure must be suitable for horizontal setup of the centrifuge.

**CAUTION** If the centrifuge isn't level, imbalances can occur and the centrifuge can be damaged. Do not place anything under the feet to level the centrifuge.

### Mains connection

**Figure 2-2. Mains connections**

1. Turn off the power supply switch on the back (press "0").
2. Plug the centrifuge into grounded electrical sockets only.
3. Check whether the cable complies with the safety standards of your country.
4. Make sure that the voltage and frequency correspond to the figures on the rating plate.

![Rating plate of the Sorvall ST 16R](image)

**Figure 2-3.** Rating plate of the Sorvall ST 16R

5. Establish the connection to the power supply with the connecting cable.

### Storage

- Before storing the centrifuge and the accessories it must be cleaned and if necessary disinfected and decontaminated.
- Store the centrifuge in a clean, dust-free location.
- Be sure to place the centrifuge on its feet.
- Avoid direct sunlight.

• “Switch on centrifuge” on page 4-2
• “Lid Opening” on page 4-2
• “Close lid” on page 4-2
• “Rotor installation” on page 4-2
• “Entering parameters” on page 4-4
• “Saving programs” on page 4-6
• “Centrifuging” on page 4-7
• “Temperature adaptation during standstill” on page 4-8
• “Short-term centrifuging” on page 4-8
• “Removing the rotor” on page 4-8
• “Switching the centrifuge off” on page 4-9
Switch on centrifuge

1. Turn on the power switch on the back of the device. The device performs a self-check of its software.
   a. When the centrifuge lid is closed the following display shows:

   ![Image showing 0 0:00 -10 9 9 3608]

   The speed and time displays read 0. The temperature indicator displays the current temperature inside the rotor chamber. The preset acceleration and braking curves and the selected bucket are also displayed.
   b. When the centrifuge lid is open the following display shows:

   ![Image showing 15000 1:30 -10 9 9 3608]

   The speed and time displays show the preset values. The temperature indicator displays the current temperature inside the rotor chamber. The preset acceleration and braking curves and the selected bucket are also displayed.

Lid Opening

1. Press the "OPEN" key.

   ![Warning icon]

   **WARNING** Do not reach into the crack between the lid and the housing. The lid is drawn shut automatically. Use the emergency release only for malfunctions and power failures (see "Mechanical Emergency Lid Release" on page 7-2).

Close lid

Close the lid by pressing down on it lightly in the middle or on both sides of it. One lock closes the lid completely. The lid will close automatically.

   ![Warning icon]

   **WARNING** Do not reach into the crack between the lid and the housing. The lid is drawn shut automatically.

   **Note** The lid should audibly click into place.

Rotor installation

The approved rotors for the Sorvall ST 16 / 16R are listed in section “Rotor selection” on page 1-6. Use only the rotors and accessories from this list in the centrifuge.

   ![Warning icon]

   **CAUTION** Unapproved or incorrectly combined accessories can cause serious damage to the centrifuge.
The rotors are equipped with an AutoLock™ locking system.

This system is used to automatically lock the rotor to the centrifuge spindle. The rotor does not have to be bolted onto the centrifuge spindle.

Proceed as follows:

1. Open the lid of the centrifuge and if necessary remove any dust, foreign objects or residue from the chamber.
   AutoLock™ and o-ring must be clean and undamaged.

2. Hold the rotor over the shaft and let it slide slowly down the centrifuge spindle.
   The rotor clicks automatically into place.

3. Check if the rotor is properly installed by lifting it slightly on the handle. If the rotor can be pulled up, then it must be reclamped to the centrifuge spindle.

   **CAUTION** Do not force the rotor onto the centrifuge spindle.
   If the rotor is very light, then it may be necessary to press it onto the centrifuge spindle with a small amount of pressure.

4. Place the rotor lid onto the rotor.

   **WARNING** If the rotor cannot be properly locked in place after several attempts, then the AutoLock™ is defective and you are not permitted to operate the rotor.
   Check for any damage to the rotor: Damaged rotors must not be used.
   Keep the hub area clear of objects.

   **CAUTION** Check that the rotor is properly locked on the centrifuge spindle before each use by pulling it a its handle.

   Be sure to check all sealings before starting any aerosol-tight applications.
   See the information in the rotor instruction manual.

5. Close the centrifuge lid.
**Entering parameters**

The Sorvall ST 16 offers you a total of 9 acceleration and 10 braking curves with which samples and gradients can be centrifuged.

After the centrifuge is turned on, the last running profile selected is shown.

**Acceleration curve**

1. Press the `▼ ▲` key below the ACC display in order to open the acceleration profile selection menu. The display shows the message "Acceleration"

2. Select the profile by pressing the `▼ ▲` key, until the desired acceleration curve shows.

**Set acceleration 9**

**Braking profile**

1. Press the `▼ ▲` key below the DEC display in order to open the braking profile selection menu. The display shows the message "Set Deceleration"

2. Select the profile by pressing the `▼ ▲` key, until the desired deceleration curve shows.

**Preselecting Speed / RCF**

1. Press the `▼ ▲` key below the "SPEED" display. The display shows the "RPM" or the "RCF"-value depending on the display setting. Press the `▼ ▲` key to toggle between the two values.

2. Enter the desired value by pressing the `▼ ▲` key repeatedly, until the desired value shows.

Note If an extremely low RCF value has been selected, it will be corrected automatically if the resulting speed is less than 300 rpm.
Running time preselection

1. Press the \( \downarrow \uparrow \) key below the TIME display in order to open the runtime selection menu. The display shows the message "Set Time". Enter the desired runtime in H.mm

![Set time](image)

2. Enter the desired value by pressing the \( \downarrow \uparrow \) key repeatedly, until the desired value shows.

Continuous operation

1. Press the "START" key \( \Rightarrow \). During continuous operation, the centrifuge will continue running until you stop it manually.

![HOLD Non-Stop mode](image)

Preselecting the temperature

You can preselect temperatures between -10 °C and +40 °C.

To set the temperature, proceed as follows:

1. Press the \( \downarrow \uparrow \) key below the TEMPERATURE display in order to open the temperature selection menu. The display shows "Set temp".

![Set temp - 10°C](image)

2. Enter the desired value by pressing the \( \downarrow \uparrow \) key repeatedly, until the desired value shows.

Explanation of RCF value

The relative centrifugal force is given as a multiple of the force of gravity g. It is a unitless numerical value which is used to compare the separation or sedimentation capacity of various devices, since it is independent of the type of device. It simply involves the rotational radius and the rotating speed:

\[
RCF = 11,18 \times \left( \frac{n}{1000} \right)^2 \times r
\]

- \( r \) = Rotational radius in cm
- \( n \) = Speed in rpm

The maximum RCF value is related to the maximum radius of the tube. Remember that this value is reduced depending on the tubes and adapters used. This can be accounted for in the calculation above if required.
Prewarming or precooling the centrifuge

For setting the pretemp value for the centrifuge proceed as follows:

1. Press the key below the TEMPERATURE display in order to open the temperature selection menu.
   The display shows the message "Set PreTemp"

2. Enter the desired value by pressing the key repeatedly, until the desired value shows.

3. Close the centrifuge lid.

4. Press the "START" key.

The rotor chamber is cooled down or heated up to the preset temperature.

5. Press the "STOP" key.

Bucket selection

Bucket selection is only possible for swing-out rotors. The bucket code corresponds to the last four digits of the bucket catalog number.

1. Press the "BUCKET" key.
   The display shows the following message:

2. Press the BUCKET key repeatedly until the bucket being used is displayed.

Saving programs

1. Enter the program parameters.

2. Press any of the program store keys for 5 seconds.
Centrifuging

Once the rotor has been properly installed, the main switch has been turned on and the lid has been closed, you can start centrifuging.

Starting centrifuge program

Press the START key on the control panel. The centrifuge accelerates to the pre-set speed with the time display active.

If the speed setting is higher than the maximum permissible speed or RCF-value for the particular rotor, then the display will show the message max. 4,700 rpm once the centrifuge has been started.

Within 15 seconds you can apply this value by pressing the "START" key again, and the centrifuging program will continue. Otherwise the centrifuge will stop and you will have to enter a valid number.

You cannot open the lid as long as the centrifuge is running.

Imbalance indicator

If a load is imbalanced, this will be indicated at speed higher than approx. 300 rpm by the message "Imbalanced load".

The run will terminate.

Check the loading and start the centrifuge once again. See the information on proper loading in the rotor instruction manual. For information on troubleshooting, see section “Troubleshooting by user” on page 7-3.

Stopping the centrifuging program

With preset running time

Usually the running time is preset and you only have to wait until the centrifuge stops automatically when the preset time limit expires.

As soon as the speed drops to zero, the message "END" will appear in the display. By pressing the OPEN key, you can open the lid and remove the centrifuged material.

You can also stop the centrifuging program manually at any time by pressing the "Stop" key.

Continuous operation

If you selected continuous operation (see “Continuous operation” on page 4-5), you will have to stop the centrifuge manually. Press the STOP key on the control panel. The centrifuge will be decelerated at the designated rate. The message "END" will illuminate, and after pressing the OPEN key the lid will open and you can remove the centrifuged material.
Temperature adaptation during standstill

The temperature cannot be adapted until the rotor has been positively identified; the speed display will then show "END".

When the rotor is not recognized (lid closed and START key not yet pressed, speed display "0"), the centrifuge responds by ensuring that the sample cannot freeze regardless of the rotor being used.

Short-term centrifuging

For short-term centrifuging, the Sorvall ST 16 / 16R has a "Pulse"- function.

By holding down the PULSE key, spinning will start and continue until the key is let go.

The centrifuge accelerates and brakes at maximum power. Any rpm or RCF entered beforehand is overridden.

**Note** The centrifuge accelerates to maximum speed, regardless of which rotor was installed.

Check carefully whether you have to maintain a certain speed for your application.

During the acceleration process, time is counted forwards in seconds. The reading stays displayed until the centrifuge lid is opened.

Removing the rotor

To remove the rotor, proceed as follows:

1. Open the centrifuge lid.

2. Grab the rotor handle with both hands and press against the green AutoLock™ key. At the same time, pull the rotor directly upwards with both hands and remove it from the motor shaft. Make sure not to jam the rotor while doing this.
Aerosol-tight rotors

When using a lid sealed against aerosols, you can only remove the rotor with the rotor lid closed! This is for your personal safety and to ensure the integrity of the samples.

**CAUTION** Rotors supplied with a lid for aerosol-tight applications come with a mandril, which belongs to the AutoLock™. Be sure not to place the lid onto this mandril to prevent it from being damaged.

**WARNING** Mind the AutoLock™-mandril inside the lid. Do not touch.

Switching the centrifuge off

1. To turn off the centrifuge put the mains switch to "0".
System Menu

To enter the system menu hold down any of the keys when switching the centrifuge on.

To modify setting, use the $\Delta \nabla$ keys.

- Use the $\Delta \nabla$ keys for the speed fields to navigate in the system menu.
- Use the $\Delta \nabla$ keys for the bucket field to navigate from one system menu item to the next.

Cleaning Intervals

For the sake of personal, environmental, and material protection, it is your duty to clean and if necessary disinfect the centrifuge on a regular basis.

<table>
<thead>
<tr>
<th>Maintenance</th>
<th>Recommended interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clean rotor chamber</td>
<td>daily or when polluted</td>
</tr>
<tr>
<td>Clean rotor</td>
<td>daily or when polluted</td>
</tr>
<tr>
<td>Accessories</td>
<td>daily or when polluted</td>
</tr>
<tr>
<td>Cabinet</td>
<td>Once per month</td>
</tr>
<tr>
<td>Ventilation holes</td>
<td>Every six months</td>
</tr>
</tbody>
</table>

CAUTION Refrain from using any other cleaning or decontamination procedure than those recommended here, if you are not entirely sure that the intended procedure is safe for the equipment. Use only approved cleansers. If in doubt, contact Thermo Fisher Scientific.

Cleaning

When cleaning centrifug

- Use warm water with a neutral solvent.
- Never use caustic cleaning agents such as soap suds, phosphoric acid, bleaching solutions or scrubbing powder.
- Rinse the cavities out thoroughly.
- Use a soft brush without metal bristles to remove stubborn residue.
- Afterwards rinse with distilled water.
- Place the rotors on a plastic grate with their cavities pointing down.
- If drying boxes are used, the temperature must never exceed 50 °C, since higher temperatures could damage the material and shorten the lifetime of the parts.
- Use only disinfectants with a pH of 6-8.
- Dry aluminum parts off with a soft cloth.
- After cleaning, treat the entire surface of aluminum parts with corrosion protection oil (7000 9824). Also treat the cavities with oil.
- Store the aluminum parts at room temperature or in a cold-storage room with the cavities pointing down.

CAUTION Before using any cleaning or decontamination methods except those recommended by the manufacturer, users should check with the manufacturer that the proposed method will not damage the equipment.
Clean centrifuge and accessories as follows:

1. Open the centrifuge.
2. Turn off the centrifuge.
3. Pull out the power supply plug.
4. Grasp the rotor with both hands and lift it vertically off the centrifuge spindle.
5. Remove the centrifuge tubes and adaptors.
6. Use a neutral cleaning agent with a pH value between 6 and 8 for cleaning.
7. Dry all of the rotors and accessory after cleaning with a cloth or in a warm air cabinet at a maximum temperature of 50°C.
8. Clean the housing of the centrifuge as needed.
   • After cleaning, treat the entire surface of aluminum parts with corrosion protection oil (7000 9824). Also treat the cavities with oil.
   • Tread the boldof the swing out rotor with bold grease (75003786).

**CAUTION** When cleaning, do not allow liquids, especially organic solvents, to get on the drive shaft, the bearings, the AutoLock™ or the locks. Organic solvents break down the grease in the motor bearing. The drive shaft could freeze up.

After some applications their might be ice in the rotor chamber. Let the ice melt and drain it off. Clean the rotor chamber as described above.

**Disinfection**

Disinfect the centrifuge immediately whenever infectious material has spilled during centrifugation.

**WARNING** Infectious material can get into the centrifuge when a tube breaks or as a result of spills. Keep in mind the risk of infection when touching the rotor and take all necessary precautions.
In case of contamination, make sure that others are not put at risk.
Decontaminate the affected parts immediately.
Take other precautions if need be.

Use a sprayer whenever possible so that all surfaces are covered evenly.

The rotor chamber and the rotor should be treated preferably with a neutral disinfectant. A disinfectant spray would be most suitable for this purpose so that the rotor and accessory surfaces are covered evenly.

**CAUTION** Before using any cleaning or decontamination methods except those recommended by the manufacturer, users should check with the manufacturer that the proposed method will not damage the equipment.
Observe the safety precautions and handling instructions for the cleaning agents used.
Contact the Service Department of Thermo Fisher Scientific for questions regarding the use of other disinfectants.

Disinfect the rotor and accessories as follows:

1. Open the centrifuge.
2. Turn off the centrifuge.
3. Pull out the power supply plug.
4. Grasp the rotor with both hands and lift it vertically off the centrifuge spindle.
5. Remove the centrifuge tubes and adaptors and dispose of them or disinfect them.
6. Treat the rotor and accessories according to the instructions for the disinfectant (spray or soak in solution). Adhere strictly to the given application times.
7. Be sure the disinfectant can drain off the rotor.
8. Rinse the rotor and rotor lid thoroughly with water and then rub down.
9. Dispose of the disinfectant according to the applicable guidelines.
10. Dry all of the rotors and accessories after cleaning with a cloth or in a warm air cabinet at a maximum temperature of 50°C.
   - After cleaning, treat the entire surface of aluminum parts with corrosion protection oil (7000 9824). Also treat the cavities with oil.
   - Tread the bold of the swing out rotor with bold grease (75003786).

**Decontamination**

Decantaminate the centrifuge immediately whenever radioactive material has spilled during centrifugation.

**WARNING** Radioactive material can get into the centrifuge when a tube breaks or as a result of spills. Keep in mind the risk of infection when touching the rotor and take all necessary precautions.

In case of contamination, make sure that others are not put at risk.

Decontaminate the affected parts immediately.

Take other precautions if need be.

**CAUTION** Before using any cleaning or decontamination methods except those recommended by the manufacturer, users should check with the manufacturer that the proposed method will not damage the equipment.

For general radioactive decontamination use a solution of equal parts of 70% ethanol, 10% SDS and water.

Disinfect the rotor and accessories as follows:

1. Open the centrifuge.
2. Turn off the centrifuge.
3. Pull out the power supply plug.
4. Grasp the rotor with both hands and lift it vertically off the centrifuge spindle.
5. Remove the centrifuge tubes and adaptors and dispose of them or disinfect them.
6. Rinse the rotor first with ethanol and then with de-ionized water.
   • Adhere strictly to the given application times.
7. Be sure the decontamination solution can drain off the rotor.
8. Rinse the rotor and accessories thoroughly with water.
9. Dispose of the decontamination solution according to the applicable guidelines.
10. Dry all of the rotors and accessories after cleaning with a cloth or in a warm air cabinet at a maximum temperature of 50°C.
    • After cleaning, treat the entire surface of aluminum parts with corrosion protection oil (7000 9824). Also treat the cavities with oil.
    • Tread the bold of the swing out rotor with bold grease (75003786).

**Autoclaving**

1. Before autoclaving clean rotor and accessories and described above.
2. Place the rotor on a flat surface.
   • Rotors and adapter can be autoclaved at 121 °C.
   • The maximum permissible autoclave cycle is 20 minutes at 121 °C.

Clean the rotor before autoclaving and rinse it with distilled water. Remove all accessories (tubes, adapters) from the rotor. Place the rotor on a flat surface.

**Note** No chemical additives are permitted in the steam.

**CAUTION** Never exceed the permitted temperature and duration when autoclaving. If the rotor shows signs of corrosion or wear, it must be replaced.

**Service of Thermo Fisher Scientific**

Thermo Fisher Scientific recommends having the centrifuge and accessories serviced once a year by an authorized service technician. The service technicians check the following:

• the electrical equipment
• the suitability of the set-up site
• the lid lock and the safety system
• the rotor
• the fixation of the rotor and the drive shaft

Thermo Fisher Scientific offers inspection and service contracts for this work.
Troubleshooting

Contents
• “Mechanical emergency lid release” on page 7-2
• “Troubleshooting by user” on page 7-3
• “When to contact customer service” on page 7-6
Mechanical emergency lid release

During a power failure, you will not be able to open the centrifuge lid with the regular electric lid release. A mechanical override is provided to allow sample recovery in the case of an emergency. However, this should be used only in emergencies and after the rotor has come to a complete stop.

**WARNING** The rotor can still be spinning at high speed. If touched, it can cause serious injuries.

Always wait a few minutes until the rotor has come to a stop without braking. The brake does not work when there is no current. The braking process lasts much longer than usual.

Proceed as follows:
1. Make sure the rotor has stopped (view port in the lid).

**WARNING** Never use your hand or other tools to brake the rotor.

2. Pull out the power supply plug.

3. On the left side of the housing is one white plastic plugs which you can pry out of the side plate with a screwdriver or a knife.

Pull the release cord attached to it to trigger the mechanical lid release. The lid will open and the samples can be removed.

4. Push the cord back into the centrifuge and mount the plugs.

Reconnect the centrifuge once the power has been restored. Switch on the centrifuge. Press the OPEN key to have the lid locks operative again.
If problems occur other than those listed in this table, the authorized customer service representative must be contacted.

</tbody>
</table>
When to contact customer service

If you need to contact customer service, please provide the order no. and the serial no. of your device. This information can be found on the back near the inlet for the power supply cable.

To identify the software version, proceed as follows:

1. Hold down any of the keys and then switch on the centrifuge. You enter the system menu.
2. Press the START key.
3. Press and hold the ENTER key until the following message is displayed:

   Software ID: XXXXXXXX

4. Communicate the software version to the service technician.

</table>

**Key**

- **S**: Satisfactory
- **M**: Moderate attack, may be satisfactory for use in centrifuge depending on length of exposure, speed involved, etc.; suggest testing under actual conditions of use.
- **U**: Unsatisfactory, not recommended.
- --: No data available. Because no organized chemical resistance data exists for materials under the stress of centrifugation, when in doubt we recommend pretesting sample lots. Suggest testing, using sample to avoid loss of valuable material.

Chemical resistance data is included only as a guide to product use.
